The Semantic Web is an idea of World Wide Web inventor Tim Berners Lee that the Web as a whole can be made more intelligent and perhaps even intuitive about how to serve a users needs. Although search engines index much of the Web s content, they have little ability to select the pages that a user really wants or needs. Berners Lee foresees a number of ways in which developers and authors, singly or in collaborations, can use self descriptions and other techniques so that the context understanding programs can selectively find what users want. "The Semantic Web: Crafting Infrastructure for Agency" presents a more holistic view of the current state of development and deployment. This is a comprehensive reference to the rapidly developing technologies, which are enabling more intelligent and automated transactions over the internet, and a visionary overview of the implications of deploying such a layer of infrastructure. It includes a through examination of the Semantic Web, including the following topics: web information management, languages and protocols, application and tools, and collaboration and agency.

It is a unique volume of practical information, in depth analysis, conceptual overviews and contextual material from professionals in the field. It features appendices of technical terms and glossary, Semantic Web resources, intellectual property issues and lists of elements. This is essential reading for engineers, web developers and industry professionals wishing to enhance their knowledge of recent developments. Management staff, lecturers, postgraduate and undergraduate students will also find this book appealing.

STUDER VED HIOA Barnehagelærere kan mer enn å leke. En barnehagelærer må være tålmodig, empatisk og leken, men det er like viktig å ha pedagogikk og. The Semantic Web is the extension of the World Wide Web that enables people to share content beyond the boundaries of applications and websites. The Semantic Web: An Introduction. This document is designed as being a simple but comprehensive introductory publication for anybody trying to get into the Semantic.
